

We come from a fish farm in Denmark where we have started growing the fish Sunshine Bass. Sunshine bass are probably best known for their rapid growth. They have attained weights of six to seven pounds by three years of age. This is a fish that is very popular in the United States in their put and take lakes. This is because Sunshine Bass is one of the best fighters in its weight and any angler will get a thrill from catching one of these. As a sport fish, sunshine bass are known for their good fighting ability. Live threadfin or other small shad and shrimp are by far the most effective bait for sunshine bass. Artificial lures such as crankbaits, bucktail or feathered jigs, spinners and spoons also do well. Topwater lures also are effective when fish are schooling near the surface. Besides being good fighters, then the Sunshine Bass also have great taste. The taste is a mild fish with delicate, slightly sweetness.

Sunshine Bass

- Hybrid of *Morone chrysops* x *Morone saxatilis*
- Can't survive cold temperatures below 4°C
- These factors does that it can't reproduce and can't survive our winter, so no risk to the normal habitats if any should get out
- Last, it is one of the best fighters in the world to its size, so a great challenge for any angler
